

God gave us...

“Onion” (*Allium cepa*)

Planting depth: ½” Apart in row (after thinning): ½”-1” Distance between rows: 12”-18” Approximate days to germination: 7-12days

♥ Let's grow...

Bunching onion seeds are very small. They should be sprinkled in rows over the ground and covered with a small amount of soil about ½” deep. Onions grow best when planted in a sunny area where the soil has been dug deeply and does not have stones or weeds. It takes about 7-12 days for the seeds to sprout into seedlings. Seedlings are new plants grown from seeds.

♥ Taking care of God's creation...

It is important that onion seedlings have even watering. Thin to ½”-1” apart in a row so that they have enough room to grow. Onions are ready to pick when the stem is about 6” tall or the tops turn yellow or bend.

♥ Eat your onions...

Also known as green onions, they were first grown in Asia nearly 5,000 years ago. Onions are a good source of vitamins for healthy bodies. You can show God's love to others by sharing the good food that he has given us to eat.

“We remember the fish we ate for free in Egypt.
We also had cucumbers, melons, leeks, onions and garlic.” Numbers 11:5
